I certainly cannot understand why this attached letter containing exhibit # 003A-032 and listed on public information # 758 would indicate it came from both Alberta Environment and Alberta Energy and Utilities Board?? Any similarities between the two supposedly Alberta Tribunals are very slight to say the least!!

Alberta Environment work directly under the control of the Alberta Minister of the Environment, Alberta Energy and Utilities Board work without the need or direction of the Alberta Minister of Energy!! Nothing points this out more directly than the then EUB chairman signing a document involving the Alberta public with costs, associated with a Federal Environment Review?? The Minister of Alberta energy was nowhere in site, while it indeed was the Federal Minister of the Environment's signature that involved the small. part to be played by Federal folks??

As I has stated many times this exercise has been completely taken over by the now ERCB. With all deciding members either ERCB employees or temporary members of the ERCB! The ERCB "rules of Practice" used as the guide for the hearing!! The Panel Counsel a ERCB employee, despite being in a obvious "Conflict of Interest" with respect to **{Canada-Alberta Agreement,Appendix 2,S 3.4.}** **This inability to meet the aforementioned criteria was anticipated, and the panel chairman warned the moment the EUB became involved!!** This inability by the Chairman to take action when the EUB were exposed for exactly what the Chairman was warned about, leaves of course some doubt the judgment of the person named as the Chairperson of the panel by the CEAA??

The complete "Take-Over" of the total process by the now ambitious ERCB does little to diminish doubts about the chairperson arising from actions he was confronted with due to the Alberta ERCB partnership and 3-well application allowed at a Federal Environmental Review!! Encana's attempt to have their Provincial agent act on this Federal issue, has back-fired, and makes a positive outcome for EnCana appealable, should the present Panel be so foolish in their directions to the Federal Minister of Environment!! For posting
