Objet : Control-Control, and Control !!

Attn. Robert Connelly:

Since we have had the new dimension of a well "Blow-Out" by the proponent EnCana, on Suffield Acreage, it seems only right, the present hearing into 1275 more wells on the National Wildlife Area, contained on the same Suffield range be delayed!!

Although this could mean further cost to the lawyers who are finally ready to proceed due to a delay at EnCana request, the price with respect to the value involved would be minuscule, and easily covered by the system, who seem to spend on "public Relations" like a sailor!! Many of us that have worked for nothing would again approve further delay, this time to closer examine how this "Blow-Out" came about, and how a remedy can be found {if any} for it's prevention!! Also the fact that press releases were not forth coming from the CEEA Panel, while "Public-Relations" is indeed one of the larger expenditures of the panel, according to information received from the ERCB under a Foip request!!

Until a determination of both cause and remedy can be found, for exactly what many have suggested the problems with EnCana's operations, it indeed would be reckless to proceed any further down the path of approval for even further wells on this pristine range!!

The delay time could be used for CEEA to locate a suitable venue for a Federal Environmental Review. The ERCB tried this same control trick with the "Compton Hearing" only to have it moved to the Calgary Zoo that is a benefit to that public institution as well as far far more suitable than Govier Hall!!
