Subject: PNW LNG

I am writing this letter in support of Pacific Northwest LNG.

I grew up in Fort St John spending lots of time in the outdoors hunting and fishing. After graduating high school I pursued a BSc. degree in Petroleum Engineering with the hope of working on projects in the area I grew up in while still being able to enjoy the outdoors that I grew up in, hunting for big game in areas my dad was able to hunt in as a kid and sharing memories and traditions that I can hopefully pass on to the next generation.

Far too many times the discussion around big projects such as PNWLNG has led to a debate of economy versus the environment with proponents of each side sharing their views. As an avid outdoorsman and oil and gas professional, I very strongly believe that we as Canadians can have a strong economy while at the same time looking after the environment and this is something I have come to expect as a Canadian citizen.

Not all projects put forward to the CEAA have the ability to contribute to the economy while protecting the environment and I feel it is important that any project unable to protect the environment is not allowed to proceed!

Having said that, I strongly believe that Pacific Northwest LNG has put in a significant effort to protect the environment with their planned project. In addition to protecting the environment, this project will provide jobs that are desperately needed in the oil and gas industry.

Thank you for your time in reading my letter.
