Subject: Pacific NorthWest LNG - I SUPPORT RESPONSIBLE LNG

Dear CEAA:

Federal scientists have examined environmental issues around the Pacific NorthWest LNG proposal and found that salmon and marine habitat will not be harmed as long as the rules and mitigation procedures are followed. Many other aspects were also found to be safe. This satisfies me because natural gas exports will create responsible revenue sources so that Canada can continue to be a global beacon of peace, prosperity and good government.

I agree Ottawa has a job to do on climate. Natural gas has a positive part to play in this mission, and the direction of how things are being done today.

I hope you will make the right decision as the PNW LNG project prepares to move forward with respect to the demands by First Nations for pathways out of poverty; help developing nations adopt natural gas as a cleaner form of energy; and support a prosperous Canada. This project will create thousands of jobs during the construction of the pipeline and the facilities required. In discussion with <confidential information removed> who have built literally thousands of kilometres of pipeline throughout Canada, are in support of this project as well and prepared to work with Pacific Northwest LNG, building it right, on time and on budget.

Thank you.
