To: Pacific Northwest LNG / GNL Pacific Northwest (CEAA/ACEE)

Subject: Submission

Dear Sir/ Madam,

Canada and the worlds future is based on clean energy, this is what will drive future economic growth and prevent catastrophic climate change.

Pacific Northwest LNG will increase local and global ghg emissions, and when combined with the upstream emissions from the natural gas drilling is likely to lock in higher ghg emissions for a generation. This puts Canada's INDC, 2030 ghg target and Paris commitment to keep temperature rise to less than 2 degrees.

LNG proponents believe that use of LNG will decrease downstream emissions by replacing coal but I doubt this. Once an LNG power station is built it will remain in operation for 25 yrs plus. This puts in danger the objective of removing fossil fuel use and with the every increasing speed at which renewables are declining probably increases emissions in the medium term and locks BC in to the wrong type of economic handcuffs.

Please reject this proposal.

Kind regards

Neil
