Subject: Woodfibre LNG - Upstream Emissions report

Thank you for including the upstream emissions from the Woodfibre LNG project in your decision making. It is very important to my future that of our province and our country to act on climate change by forcing any new business to operate in a way that reduces emissions in production, not increases them.

Based on your report which seems conservative, the combined GHG emissions are taking us in the wrong direction. I do not support some short term gains that I doubt very much I will benefit from for long term fateful consequences such as the effects of climate change due to our contribution on greenhouse gas emissions.

As well, Howe Sound is too special and should not be spoiled by having this LNG production located at Woodfibre. I wish to raise my children in a place where we can enjoy clean air, safe waterways, quality of life and the natural beauty that is found in Howe Sound.

Do not allow this new development of LNG to proceed. Please say no!

Thank you for reading,

Emily Haddad
