Subject:

Good evening all,

Re: Woodfibre LNG

The effects on the Sound's recovering marine life and mammals are unknown!
Transiting LNG Tankers, the liquefaction plant, storage tankers and the flare stack will all emit noise – over the water, through the water and air.
Noise effects on the Sound's marine life are also little studied!
Light, sound and air pollution effects on other species – elk, grizzlies, migratory birds etc. - are unknown, as are tanker wake effects.

Too many risks.

Vel Anderson
