

*Note: The following form letter was submitted by 2169 individuals (listed on the following pages) as part of a letter writing campaign to the Impact Assessment Agency of Canada.*

To the Honorable Steven Guilbeault, Minister of Environment and Climate Change Canada and the Impact Assessment Agency of Canada:

I write to urge you to refuse the application from Woodfibre LNG Limited to amend the Decision Statement issued under Section 54 of CEAA 2012.

I am extremely concerned about the negative effects that the amendment of conditions 3.8 and 6.4 would have on local aquatic environments and at-risk species when the project starts construction.

As you know, the project sits in a UNESCO Biosphere Reserve and should be held to the highest environmental protection standards to respect the area's biodiversity and fragile environmental recovery.

Instead, Woodfibre is now requesting changes in their project's conditions to decrease their environmental protection measures. The requested changes would allow the project to exclude pinnipeds from the required 7,332m zone for marine mammals and reduce it to only 125m for pinnipeds.

This change would expose pinnipeds to 190 decibels of underwater noise and while it will likely not cause physical damage to these species, it will likely cause behavioural changes that can put their survival at risk.

This is unacceptable. The area is home to Steller Sea Lions, a species listed as of special concern under the federal Species At Risk Act (SARA) and whose recovery your government is responsible for.

Large amounts of underwater noise are also known to influence the behaviour of fish prey and even underwater organisms such as plankton. Natural ecosystems need to be assessed as complete systems, not in isolation as Woodfibre LNG is currently doing.

Additionally, it is important to consider that the underwater noise produced by a single activity of the project is likely to not be the only source of underwater noise at one given moment in the area, making it possible for underwater noise levels to be higher than those predicted by the project.

The changes in condition 3.4 would only benefit the applicant while putting in jeopardy the survival and recovery of the marine environment and species at risk in Átl'ka7tsem/Howe Sound.

You have a responsibility to ensure the protection of the marine environment and the species and people that depend on it. Approving these changes would neglect that responsibility and would give a clear message that a fracked gas company's profits are more important than the land and waters our communities depend on.
