The Beaver Dam Mine has been a concern for several years. Observing the information provided and researching own information on own has been concerning. There is a major concern about environmental impact, aboriginal hunting and fishing rights. The rights of indigenous people are severely impacted in this project and our rights are not for sale or negotiable.

- The impact on local environment & community is exceedingly detrimental; The pros of operation are minimal comparative to the cons.
- no adequate science to prove the environmental impacts are acceptable;
- no consideration regarding how the environmental impacts will affect land use, cultural activities, traditional hunting/fishing of communities/locals.
- methods of removal of resources - using chemicals to extract, than placing into ponds is detrimental, no science will convince me that cyanide or any other toxic chemical should be stored in a pond safely.
- we live in unceded Mi'kmag Territory, lack of meaningful consultation, inability to hear our voices and distrust of this endeavour has shown the true colors of those pushing this project forward. Our land, our resources! Its our duty as Indigenous people to protect our land and its resources - we do not support this project & its destruction of our land and theft of our resources.

My concerns mainly are
The effect is going to have on my
environment, My house is the closest
one to the mine and I will not appreciate
the traffic and also am extremely
worried about what is going in
the ground to trickle down to
my drinking water/ground that
I plant my garden.

My concern is the loss of traditional hunting and fishing grounds, and that land being mined will never be the same, as well as the waterways coming from and through the mining area and roadways being used. What about any environmental disaster that could occur.

The noise and excess traffic will affect the people who live in Beaver Dam.

There might be economic gain from this project but it's only short term. There will however be long term effects from the mining for many years after the mine is closed.

Am totally against it, Just being able to drive back the road will be impossible and dangerous.

I know those chemicals will be polluting the ground and the wildlife

Everytime I come home to Beaver Dam, I either go hunting or fishing or both. I am concerned that I will no longer be able to practise my rights once the mine project begins. I do not want our land contaminated with chemicals.

would not appreciate the Beaver
Dam mines project in my own
back yard. I utilize the land
for several reasons and want
to keep it that way.

my concerns are that will be no more
Fishing / Trapping / Hunting this is my
way of life the land will be raped
my home will not be my home as for
the damage that will happen as i am
a native my way of life will be no longer
the mines coming near will run all
the ~~the~~ wildlife away this can not happen
the damage that will happen to our home
that will happen i am proud to be native
and live this way and to have this
taking from me i will not stand for
this is so unfair to our way of life and
our people

My Main Concern is the Run off of these Contaminated materials Running into the Harbour where they plan to Clearcut and put in a Road, is a Stream that flows into our backyards and into the Harbour Also more Pits holes than enough. There will be no wild life for us to hunt and fish And the Turtles will never serowe there trek across the Road in Beaver dam. Which is a yearly thing. And jobs what jobs there are. Very few young, people left in the area.

The few jobs created will only last about five years while the open pit destruction will last for decades or longer. Even though the ore will not be refined at Beaver Dam the increased tailings at Moore River will make it more likely for contamination of the local watershed. How long will St Barbara Ltd look after the tailings pond & who will be responsible when it fails? N.S. taxpayers?

Concerned about the water.

The water is the most vulnerable in this mining project.

We have already had some issues with our water when they were doing their testing and sampling.

We are worried about the wildlife that we hunt and gather.

Don't want to have to start buying bottled water.

Our water has always been good and free of any chemicals.

The excessive traffic of trucks will also hinder not only the animals, but also the residence during the day and night.
