I am very troubled to learn via the media of the plan to store radioactive waste in a questionable way in a pristine area of our country. It is very hard to find other solutions and I imagine that the challenge to transport across borders have led to this solution. Once the environment is contaminated we have no control on the extend of affect that this will have on the environment downstream and also the health implications for our children and our children's children. You are making a very dangerous decision and I ask you to stop this project now.

With a great deal of concern,

John Comfort
