Subject: Natural Resources Canada's Submission for Lynn Lake - Request for Technical Review of Round 3 Information Request Responses

On August 10, 2022 the Impact Assessment Agency of Canada (the Agency) requested Natural Resources Canada (NRCan) to conduct a technical review of Alamos Gold Inc's (the Proponent) round 3 Information Requests (IRs) responses for the Lynn Lake Project (the Project).

NRCan is participating in the environmental assessment process pursuant to section 20 of the *Canadian Environmental Assessment Act, 2012* as a department in possession of specialist or expert information or knowledge related to the Project. NRCan has conducted its review of the Proponent's responses to IRs based on the department's expertise in hydrogeology, acid rock drainage and metal leaching, as well as our role as administrators of the *Explosives Act*.

Details of NRCan's review can be found in the attached appendix (NRCan technical review - Lynn Lake Gold Project Technical Review - Round 3 IR Responses). If you have any questions. Please contact me via e-mail at vikash.narine@nrcan-rncan.gc.ca.

Thank you,

Vikash Narine
Environmental Assessment Officer
Office of the Chief Scientist
