

	Reference to Impact Assessment Report	Views on IAAC's Impact Assessment Report.
	Identify the specific section of the Impact Assessment to which your comment applies.	<p>Has IAAC:</p> <p>1) Accurately and adequately characterized the potential adverse effects within federal jurisdiction (as it relates to MTO's mandate) and relevant legislative frameworks, recommended mitigation measures, monitoring, and follow-up programs</p> <p>2) Accurately and adequately summarized any comments and views from your organization throughout the impact assessment process.</p>
MTO Functional Section	MTO Comments	
TIMD - Project Delivery	Section 3.0 - Malfunctions and Accidents - Table 6	The majority of workers are expected to be sourced from the Timmins area south of the project. Emergency response depends on reliable access (both northbound and southbound). In the event of a tailings dam breach or unexpected effluent release, any water crossing that could be impacted (Jocko Creek, effluent crossings, etc.) should be assessed for resilience under tailings or effluent-related incident scenarios. Consider adding language to this effect to the <i>Recommended mitigation measures that would be potentially ensured by the Government of Ontario</i> section of Table 6.
TIMD - Environmental	Section 2.2 - Table 5	Regarding <i>Recommended mitigation measures that would be potentially ensured by the Government of Ontario</i> : Compliance under the <i>Species Conservation Act</i> is required.
OD - Regional Services and Relationships	Section 4.2.1 - Archaeological Sites	What response was and/or is to be issued to First Nations pertaining to their expressed concerns with IAAC / Ministry of Citizenship and Multiculturalism regarding the methodology, adequacy, and recommendations of the completed Stage 1 Archaeological Assessment?
