Please Don't Make the Same Mistakes That California And SoCal Edison Have Made Regarding San Onofre!

When our plant was shuttered in 2013 due to steam generator issues, even after numerous hearings and public comments, our California Coastal Commission told Edison it was OK to just leave 3.6 pounds of high level radioactive waste in 5/8" inch canisters on the beach next to the shuttered plant. None of our federal representatives, our governors, our state senators and assembly made Any Effort to find a better place for it!

No one spoke up to say they didn't want it on their highly popular and lucrative tourist beach or spoiling their quite expensive beach front property.

No federal or state environmental agency offered to look for a storage place or even get us a Hot Cell so we could plan to move it

And it Still needs to be repackaged in thicker monitorable Casks like Europe uses!

So it sits on the beach corroding from salty air, seawater, waiting for an earthquake, tsunami or just a big King Tide to break it open, contaminate our coast and flush it out to sea!
