Subject: Impact assessment - shipping issues

Greetings. I am quite concerned about shipping issues with the proposed nuclear waste site in Ignace. The state of our highways is nothing less than deplorable at the moment. We have weekly, sometimes daily, deaths on the highway, most often involving Heavy Transports. I understand that the capsules that this material is transported in is quite robust, but I believe it will be irresponsible for nuclear waste to be shipped to the North under the current highway conditions. What is Nuclear Waste's action plan to ensure safe travel?

Thank you.....Jerry Hamel
