Subject: Nuclear Waste Management

Northern Ontario has insufficient highways now for the number of transports travelling here now , and now you want to add hundreds more carrying nuclear waste. Transport accidents are a common thing here , and they involve a lot of personal Vehicles and are causing deaths on the highways. Where is the consultation along the route , all the towns of Northern Ontario , all the money you have spread around to Ignace and Wabigoon , they are no more important than the rest of us . Medical research tells us that the amount of radiation a person can take with out being harmed is different for every one , there is no safe limit for the handling of this toxic waste. Why not berry it down east , what was wrong with the site closer to were it is used? The shipments of nuclear waste on our roads that you refer to many times over the passed years are not the volume or the high level of radiation that you propose to ship threw our cites . The town of Ignace has been in decline for years and now their saw mill is shut down , it is no wonder they jumped at the nuclear waste proposal with all that money they have received and more to come .That is pure bribery , everyone can see that ! Why are we not investing in Clean Hydro Electric Water Turbines that last for many years?
