Dear Sir or Madam;

I am asking that this assessment include Long Distance Transportation, Long term safety, workers and occupational health, and water management (pumping of water). I am concerned about this project being out of sight and out of mind in the future. How will this site be identified as radioactive for generations in the future?

I have worked for 40 years in mining communities. All mines are subject to flooding. Rock is porous. How will this be looked after into the future. Pumps fail.

I look forward to hearing from you on these items.

In Health for All, [Mutually Assured Survival](#)
