Subject: Nuclear waste proposal/ plan

To Whom it concerns:

As a resident of North Western Ontario I am seriously concerned about the potential of nuclear waste being stored underground in our pristine wilderness. The instant you build something it is failing, it's not a matter of "if", it's a matter of "when ". When it's stored above ground the containment can be easily monitored whereas I don't believe the monitoring will be as diligent underground. With the potential of a breach within the arctic watershed; everything will leech through some of the best water in the world. Therefore environmentally I do not see this as a best practice for this country or all living things.

Finally I also have concerns about the transportation through our highway network, I understand about the secure storage and most likely I would be protected from radiation however the containers holding the waste are a danger in themselves. Without divided highways the risks are much higher for everyone travelling and I don't believe we should consider putting any more strain on traffic and individuals at this time. Everyone's lives matter.

Sincerely
Tracey Johnson
