Subject: Project #88774

I am writing in regards to the route in which the waste will travel. I live along hiway 17 north and travel this hiway daily and this is not a safe route for nuclear waste to travel.

Reasons being; hiway maintenance is not a priority, weather closures during winter are increasing as climate changes more storms along great lakes, must pass by several schools, reserves, cities and towns, several provincial parks, lots of moose collisions, hiway only 2 lanes, increase in hiway wash outs, the reopening of copper mine at Batchawana bay will increase traffic north of Sault Ste. Marie.

Transporting nuclear waste along the world's largest fresh water lake is irresponsible and even inconceivable.

I am asking that all the reasons I have listed be carefully considered and that alternative routes be established.

Thank you
Rachelle Ball
