Subject: Temporary storage

Sent from my iPad as a resident of Dryden downstream of this proposed project I am concerned about what many sources have told me that nuclear waste will be “temporarily” stored at this site while the deep repository is being built after the project is approved, if this is true then it brings up a whole new potential group of questions about safety and possible contamination. This project will take at least ten years to build if waste is stored here “temporarily” there is the possibility of forest fires, tornadoes, earthquakes, flooding and other disasters affecting the storage site, I have mentioned this on the facebook sites of the groups that oppose this project, usually when anyone has a question or is in opposition to this project and says anything negative about it almost instantly a statement/ comment is posted by an NWMO proponent to address the concern, nothing was ever said about my questions of temporary storage! Why didn't they? Pekka Tuisku <personal information removed>
