### IMPACT COMMENT PART 3 LEGAL ISSUES

The genocidal secret plan is to use the Revell Lake to Lake of the Woods (and Winnipeg tap water) and through Manitoba to Hudsons Bay to the Arctic Ocean as a nuclear sewer to wash off equipment above ground. This plan has been hidden from a million plus people who have never been informed much less given consent. This above ground activity is GUARANTEED as part of the DGR. A minimum of 450.000 cubic metres and .ore if a second dump is added as currently discussed.

This nuclear sewer area is not crystalline. It is sedimentary rock which oozes water and river and streams which become sandy loam as it descends into the prairies. It is also an active earthquake zone. It is subject to overland flooding including Hwys 11&17 which are the only roads across Canada.

Continuous overland flooding will accumulate nuclear toxicity and make these highways impassable. Nuclear waste will split the country in two as nuclear waste separatism makes the land and water deadly right in the centre of Canada.

RainyLake/River and Lake of the Woods waterways are shared with the United States which has a multibillion dollar tourism industry as does Canada. The tourism industry will be devastated as will farming and mining and fisheries. Who can they sue for damages? It seems the "plan" is for no one to take responsibility for billions in losses.

This secret plan to nuclearize the Arctic Ocean has international problems. Does Denmark know and agree? Norway? Russia? China?

Or Minnesota? Manitoba?

The Rainy River is only 100 miles from the headwaters of the Mississippi River cutting through the heart of the USA.

Domestically the NWMO lobby has to counteract the determination of most indigenous people and their leaders to reject nuclear waste dumping. One plan is to take it to the UN court under Section 29 of UNDRIP which requires "full prior and informed consent". Only one reserve has been given money and has agreed to consider the dump. There are many indigenous communities in Ontario and Manitoba who have not even been informed much less consented.

What does it mean when NWMO says land and water use will have to be changed? Like everything else with this organization it is a mystery. Who will compensate those whose real estate values go the way of Elliot Lake?

This arrogant colonial attitude is not that different than 51st state talk. Ignorance and arrogance are no substitute for the truth.

The images below attempt to outline this deadly serious situation.
