Subject: Guidelines request - Adverse Health Effects

Hallo Joe

Please add to the Guidelines that Energy Alberta must satisfy the Review Panel that the adverse health effects are in the public interest. This will require them to identify all the adverse health effects and give each a quantum estimate.

Please publish this request.

Under IAA s.63, the Minister cannot approve a designated project if the Review Panel is not satisfied that the adverse effects are in the public interest. The satisfaction standard under s.63 is not "adequate provision" — it is a broader public interest weighing that explicitly includes health effects, Indigenous rights, and cumulative effects.

Hallo Energy Alberta

Please advise whether you accept this obligation and further accept that the cost-qualification cannot discharge this obligation?

Regards

Chris
