Subject: Nuclear Station In Port Hope

Good Evening IAAC,

I am writing this email to you as a submission of my comments in regards to OLG plans to build worlds largest nuclear station in Port Hope on the shore of Lake Ontario.

I don't believe this is correct decision to have something of this scale in this location on the banks of Lake Ontario.

There are too many risks involved in a project like this.

Have you required OLG to fully evaluate whether:

- Energy efficiency would be a better idea overall and less risks involved ?
- Renewable Energy would have a positive effect and faster outcome ?
- New technology advances in Energy Storage that store the energy for a certain amount of time and then release the energy to the grid when required ?
- All these options to consider, would keep overhead costs down and reduce finical costs in the long run ?
- Also the environmental risks that comes with nuclear waste being released and any accidents risks as well ?

These are all important matters to take into account and think about.
Before making a final decision.

Thank you.

Cheers,
Keegan Wharram
